

Work (Scientific Definition):

- work equals net force displacement $\cos \theta$
- doing something that requires energy
- any energy needed to complete a task
- force acting over a distance
- energy exerted on an object
- work ^{done} on an object when a force causes displacement on said object

"Official" Scientific Definition of Work:

$$\text{Work} = \overline{\text{Force}} \cdot \overline{\text{displacement}}$$

\hookrightarrow scalar \hookrightarrow vector \hookrightarrow vector

\nwarrow Dot (scalar) product

$$= (\text{Force})(\text{displacement}) \cos \theta$$

\hookrightarrow mag.

 \vec{F} and \vec{d}

units: $J = N \cdot m = \text{kg} \cdot \text{m}^2 / \text{s}^2$

Block of $m = 20 \text{ kg}$
Applied force $= 100 \text{ N}$
displacement $= 2 \text{ m}$

Find net work done on the block

$$\theta = 0^\circ$$

$$\begin{aligned} W_{\text{net}} &= W_A = F_A d \cos \theta \\ &= (100 \text{ N})(2 \text{ m}) \\ &= 200 \text{ J} \end{aligned}$$

$$\mu_k = 0.25$$

$$m = 20 \text{ kg}$$

$$F_A = +100 \text{ N}$$

$$d = +2 \text{ m}$$

find W_{net}

$$W_{\text{net}} = W_A + W_f$$

$$= F_A d \cos \theta_A + F_{fk} d \cos \theta_f$$

$$= (100 \text{ N})(2 \text{ m}) \cos(0^\circ) + (49 \text{ N})(2 \text{ m}) \cos(180^\circ)$$

$$= 102 \text{ J}$$

$$F_{fk} = \mu_k F_N = 49 \text{ N}$$

$$\Sigma \vec{F}_y = 0$$

$$F_N = F_g$$

$$= 196 \text{ N}$$
